DETAILED ACTION

Election/Restrictions

1. Claims 21-40 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected groups, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 3.
2. Applicant's election without traverse of claims 1-20 and 41 in Paper No. 3 is acknowledged.

Specification

3. The abstract of the disclosure is objected to because it contains the word "comprises" in line 2 and "means" in lines 3 and 4. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
5. Claims 1-20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 1 and 11, it is not clear what "a method" in lines 8 and 10 of the claims is. Other claims are dependent.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1-20 and 41 are rejected under 35 U.S.C. 102(b) as being anticipated by Coltrane.

Regarding claim 1, Coltrane shows a portable rocking device for rocking a baby carriage or stroller comprising:

- A base (12);
- A motor (13) fastened to said base, said motor having a power supply and a rotating shaft (14);
- A gear (22) fastened to the shaft of said motor;
- A sliding member (26) having a first end (at 27) engaged with said gear and a second end; and
- A fastening means (33) attached to the second end of said sliding member, said fastening means a method for securing said sliding member (26) to objects such as baby carriages or strollers (9).

Regarding claim 11, it is noted that Coltrane also shows a portable rocking device for rocking a baby carriage or stroller comprising:

- A base (12);
- A motor (13) fastened to said base, said motor having a power supply and a rotating shaft (14);

- A gear (22) fastened to the shaft of said motor;
- A sliding member (26) having a first end engaged with said gear and a second end;
- An extension member (31) having a first end and a second end, said first end of said extension member attached to the second end of said sliding member;

A fastening means (33) attached to the second end of said extension member, said fastening means a method securing said extension member to objects such as baby carriages or strollers (9).

Regarding claims 2 and 12, it is noted that Coltrane also shows the fastening means being selected from the group of devices including clamps, hooks, clips, magnets, screws, bolts and nuts, and ties.

Regarding claims 3 and 13, it is noted that Coltrane also shows the motor being powered by an external electric power supply.

Regarding claims 4 and 14, it is noted that Coltrane also shows the motor being powered by an internal power supply.

Regarding claims 5 and 15, it is noted that Coltrane also shows the motor being powered by an internal or external power supply.

Regarding claims 6 and 16, it is noted that Coltrane also shows the speed of rotation of said motor being adjustable.

Regarding claims 7 and 17, it is noted that Coltrane also shows the length of the stroke of the invention being adjustable.

Regarding claims 8 and 18, it is noted that Coltrane also shows the height of the base being adjustable.

Regarding claims 9 and 19, it is noted that Coltrane also shows said base having a first end (bottom) and a second end (top) with wheels (8) connected to said first end and a non-sliding material at said second end.

Regarding claims 10 and 20, it is noted that Coltrane also shows said base having a plurality of wheels attached to it.

Regarding claim 41, the method of rocking a baby carriage or stroller would be inherent and obvious since the prior art reference meet the structural limitations of the claimed device.
